TITLE	Facilities Inventory and Space Utilization Report. Ohio Institutions of Higher Education for Fall 1974.
INSTITUTION	Ohio Board of Regents, Columbus.
PUB DATE	Jul 75
NOTE	284p.
AVAILABLE FROM	Ohio Board of Regents, 30 East Broad Street, Columbus, Ohio 43215
EDRS PRICE	MF-$0.76 HC-$14.59 Plus Postage
DESCRIPTOPS	Buildings; *Educational Facilities; Facilities; Facility Expansion; Facility Guidelines; *Facility Inventory; Facility Planning; *Facility Utilization Research; *Higher Education; Laboratories; Physical Facilities; Space Classification; *Space Utilization
IDENTIFIERS	*Ohio

ABSTRACT

The Ohio Board of Regents, in its planning and coordinating role, must be able to determine the statewide facilities requirements necessary to support the educational programs while avoiding unnecessary duplication of effort. This document provided an informational basis for making decisions and establishing policies at all levels, and opens a dialogue between the public and private sectors of Ohio's higher education partnership. The purpose of collecting and presenting this information is to provide a basis on which managerial decisions can be made regarding the need for and the use of facilities in Ohio institutions of higher education. Data presented includes: building inventory record, room inventory record, classroom and laboratory utilization report, summary of all buildings by date of construction, gross and net assignable square feet by function and room type. FOREWORD

This report is the culmination of several months of collecting, processing and summarizing facilities data on the part of participating institutions of higher education in Ohio and the staff of the Ohio Board of Regents.

The data presented within is intended to be primarily factual rather than interpretive. It is hoped that responsible officials using this information will consider the limitations of examining one segment of this data without considering the overall educational program and purpose of an institution, the age and condition of their facilities, facilities presently under construction or planned, and the projected enrollments.

The Ohio Board of Regents expresses appreciation to all participating institutions and to the institutional personnel for their important contributions to the facilities comprehensive planning program.

Jack Probasco

UCTION

he Ohio Board of Regents, in its planning and coordinating role, must be able to determine the statewide facilities requirements ary to support the educational programs while avoiding unnecessary duplication of effort. The facilities planning program combined with the Uniform Information System provides a comprehensive perspective of public and private institutions of higher ion in Ohio and promotes improved coordination of resources, provides an informational basis for making decisions and establishing es at all levels, and opens a dialogue between the public and private sectors of Ohio's higher education partnership.

he purposes of collecting and presenting this information is to provide a basis upon which managerial decisions can be made regarde need for and the use of facilities in Ohio institutions of higher education. This insures that historical data is maintained so comparisons and trends can be studied and standards developed which will enable funds to be spent wisely and fairly. This report o published to encourage institutions to develop a viable and comprehensive facilities inventory and utilization system and to continue vide the Ohio Board of Regents with current and useful facts so that these data can be continued in future reports.

n constructing these data, certain guidelines and procedures have been followed by all the institutions. This information has been ted in three reports: Building Inventory Record (Appendix A); Room Inventory Record (Appendix B); and the Classroom and Laboratory ation Report (Appendix C). Detailed procedures regarding the logic and mathematical formulas have been published in the Ohio Board ents' Facilities Inventory and Space Utilization System Documentation Manual - May, 1973.

lso in presenting the data certain terms have been used for which the definitions will be helpful for its proper interpretation. rms are defined in the Regents' Uniform Information System Procedural Manual. Those deserving special attention are given in ix D.

This report is divided into five major sections:

1. Introduction
2. Summary of Square Footage Data
3. Summary of Classroom and Laboratory Inventory and Utilization Data
4. Individual Public Institution Data
5. Appendices

To briefly summarize these data the following highlights are given:

A. In reviewing the data for the past five years the Ohio public and private institutions of higher education have increased their facilities from 52 million net assignable square feet (NASF) in 1970 to nearly 60 million NASF in 1974, or slightly more than 15 percent.

NASF (Million)

	1970	1971	1972	1973	1974
Public	31	33	36	37	38
Private	21	22	22	22	22
Total	52	55	58	59	60

This compares to an increase of 4 percent in the headcount enrollment in Ohio during the same period.

ENROLLMENT (000)

	1970	1971	1972	1973	1974
Public	279.4	290.5	294.4	298.1	300.0
Private	94.1	92.4	92.0	90.0	90.0 (Est.)
Total	373.5	382.9	386.4	388.1	390.0

B. During the past several years although the amount of facilities have increased at a greater percent than en has been brought on by the establishment of several medical colleges and the construction of technical labo physical education facilities at the public two-year institutions. Also the enrollment at the private inst decreased slightly while their physical plant has remained relatively the same.

C. Of the net assignable space in all public and private institutions for the Fall 1974 period, 7.4 percent wa as classroom space; 14.3 percent--labs; 12.8 percent--offices; 7.0 percent--libraries; 24.0 percent--reside with the remaining space used for support, special use, general use and medical care facilities.

D. In comparing the net assignable square feet (NASF) per full-time equivalent (FTE) day student by various ro the public universities have the lowest NASF per day FTE average for classrooms (11) and teaching laborator have the highest average for offices (30) and support facilities (31) than any other group. For technical the type of instruction demands the initial construction of instructional laboratory space the average NASF student for such space is 45 as compared to 24 at the community colleges. Technical colleges, though, have athletic facilities and assembly areas as compared to the other institutional groups.

During the past several years although the amount of facilities have increased at a greater percent than enrollment this has been brought on by the establishment of several medical colleges and the construction of technical laboratories and physical education facilities at the public two-year institutions. Also the enrollment at the private institutions have decreased slightly while their physical plant has remained relatively the same.

Of the net assignable space in all public and private institutions for the Fall 1974 period, 7.4 percent was classified as classroom space; 14.3 percent--labs; 12.8 percent--offices; 7.0 percent--libraries; 24.0 percent--residential facilities with the remaining space used for support, special use, general use and medical care facilities.

In comparing the net assignable square feet (NASF) per full-time equivalent (FTE) day student by various room types, the public universities have the lowest NASF per day FTE average for classrooms (11) and teaching laboratories (19) but have the highest average for offices (30) and support facilities (31) than any other group. For technical colleges where the type of instruction demands the initial construction of instructional laboratory space the average NASF per day FTE student for such space is 45 as compared to 24 at the community colleges. Technical colleges, though, have minimal indoor athletic facilities and assembly areas as compared to the other institutional groups.

SUMMARY OF FACILITIES INVENTORY

GROSS SQUARE FEET AREA

During the Fall term 1974 Ohio institutions of higher education reported a gross square footage of all buildings own and leased of 90 million square feet. Of this figure 63.6% was public institutional space.

The estimated value of this physical plant has reached the $3 billion level with two-thirds being publicly owned. I estimated that between $375 and $400 million will be necessary to renovate or replace these facilities to bring them up t standards. As shown in Table 2 half of the pre 1930 facilities are owned by the private institutions.

FEET AREA

he Fall term 1974 Ohio institutions of higher education reported a gross square footage of all buildings owned, rented
90 million square feet. Of this figure 63.6% was public institutional space.

mated value of this physical plant has reached the $3 billion level with two-thirds being publicly owned. It has been
t between $375 and $400 million will be necessary to renovate or replace these facilities to bring them up to modern

3.3	14.9	9.7	14.6	13.4	34.1	

NET ASSIGNABLE SQUARE FEET

Ohio institutions of higher education had facilities containing nearly 60 million net assignable square feet in 1974. 63 percent or nearly 38 million NASF was in public institutions.

Although the type of net assignable space will vary by institution the following tables present various methods of summ this data. Tables 3 and 4 show the net assignable square feet (NASF) per Full-Time Equivalent (FTE) student by room type an tion performed by type of institution. Tables 5 and 6 show the percentage distribution of the room function and room type b of institution.

In reviewing this data, certain factors must be considered. For example, the NASF per FTE figures are based on 1974 FT student data. Before any conclusions are made concerning this data the projected enrollments must be considered as well as facilities planned, those under construction and those planned for demolition.

Since a clear understanding of the room type and function categories is necessary in analyzing this data, definitions o terms are provided in Appendix D. Additional information on these terms can be found in the Ohio Board of Regents' Uniform System Manual.

E SQUARE FEET

titutions of higher education had facilities containing nearly 60 million net assignable square feet in 1974. Of this, nearly 38 million NASF was in public institutions.

the type of net assignable space will vary by institution the following tables present various methods of summarizing ables 3 and 4 show the net assignable square feet (NASF) per Full-Time Equivalent (FTE) student by room type and func- d by type of institution. Tables 5 and 6 show the percentage distribution of the room function and room type by type n.

ving this data, certain factors must be considered. For example, the NASF per FTE figures are based on 1974 FTE Before any conclusions are made concerning this data the projected enrollments must be considered as well as the anned, those under construction and those planned for demolition.

clear understanding of the room type and function categories is necessary in analyzing this data, definitions of several vided in Appendix D. Additional information on these terms can be found in the Ohio Board of Regents' Uniform Information

account for 1% of the NASF at the public universities, and 1% at the private universities.

DISTRIBUTION OF SPACE BY TYPE AND USE FOR EACH PUBLIC INSTITUTION

The following tables show the distribution of net assignable square feet per day full time equivalent student (NASF/FTE) for each public institution by function and room type.

It is important to understand what the tables actually show. For example these tables do not show the space underconstr (e.g. Library of the University of Cincinnati) or those facilities which have been included in the 1975-77 Capital Budget. A in making comparisons of space one must understand the composition of each category in these tables. For example when compar space by functional use, those institutions with dormitories will naturally have a higher NASF/FTE for general auxiliary spac others. The educational programs at each institution must also be considered.

OF SPACE BY TYPE AND USE FOR EACH PUBLIC INSTITUTION

owing tables show the distribution of net assignable square feet per day full time equivalent student (NASF/FTE) lic institution by function and room type.

portant to understand what the tables actually show. For example these tables do not show the space underconstruction of the University of Cincinnati) or those facilities which have been included in the 1975-77 Capital Budget. Also parisons of space one must understand the composition of each category in these tables. For example when comparing tional use, those institutions with dormitories will naturally have a higher NASF/FTE for general auxiliary space than educational programs at each institution must also be considered.

an 1 NASF per FTE student.

SUMMARY OF CLASSROOM AND LABORATORY INVENTORY AND UTILIZATION DATA

The following tables present a brief summary of the classroom and laboratory inventory and utilization at each p These tables show the net assignable square feet per Day FTE student and the NASF per student station. These figure overview as to whether an institution actually needs additional space or whether additional student stations can be increasing facilities.

The weekly student contact hours are presented for both day and evening use. By using these contact hours as p Planning Guidelines a determination can be made as to the shortage or overage of space. It should be understood tha tables are limited and several other factors should also be considered before any interpretation or comparisons are Some of these factors are:

1. Utilization of facilities will vary according to the subject taught.

2. Station utilization will vary according to the number of seats or desks placed in a room. Normally 15 square feet per station is used as the average for classrooms. The NASF per student station for teaching laboratories will vary by type of lab. For example, biological science labs may require 65 NASF per student station while some engineering labs will require 140 NASF per station. For most institutions the average for all subjects will be between 45 to 55 NASF per station.

3. The structure of the buildings will also determine the number of stations which can be placed in the rooms (e.g. some older buildings have columns in the middle of the rooms) and thus increase the NASF per station in the room.

Classroom utilization rates and contact hours for major subjects taught are presented for each institution in this report.

CLASSROOM AND LABORATORY INVENTORY AND UTILIZATION DATA

following tables present a brief summary of the classroom and laboratory inventory and utilization at each public institution. es show the net assignable square feet per Day FTE student and the NASF per student station. These figures provide an s to whether an institution actually needs additional space or whether additional student stations can be added without facilities.

eekly student contact hours are presented for both day and evening use. By using these contact hours as part of the Space uidelines a determination can be made as to the shortage or overage of space. It should be understood that the data in these limited and several other factors should also be considered before any interpretation or comparisons are made of this data. ese factors are:

1. Utilization of facilities will vary according to the subject taught.

2. Station utilization will vary according to the number of seats or desks placed in a room. Normally 15 square feet per station is used as the average for classrooms. The NASF per student station for teaching laboratories will vary by type of lab. For example, biological science labs may require 65 NASF per student station while some engineering labs will require 140 NASF per station. For most institutions the average for all subjects will be between 45 to 55 NASF per station.

3. The structure of the buildings will also determine the number of stations which can be placed in the rooms (e.g. some older buildings have columns in the middle of the rooms) and thus increase the NASF per station in the room.

room utilization rates and contact hours for major subjects taught are presented for each institution in the next section of t.

The Chillicothe, East Liverpool and Lancaster campuses have a higher evening enrollment than the day. Therefore, the square footage per FTE student would be lower than shown if calculated on evening use.

INDIVIDUAL PUBLIC INSTITUTIONS DATA

The following tables summarize the facilities inventory and utilization data for each public campus. For each ca
are six sets of data. The first gives the building data such as gross square feet and building value. The second set
net assignable square feet by room type and function. The next two parts give classroom utilization information by si
and by day of week. The table showing utilization for each day of the week uses half hour periods in determining the
rooms in use. That is everytime a room was used for any half hour period it has been counted in the numbers of rooms

The second page of tables show the weekly student contact hours generated by major subject and type of room in wh
instruction occurred.

The final table presents the net assignable square feet for laboratories by subject.

UAL PUBLIC INSTITUTIONS DATA

e following tables summarize the facilities inventory and utilization data for each public campus. For each campus there sets of data. The first gives the building data such as gross square feet and building value. The second set shows the ignable square feet by room type and function. The next two parts give classroom utilization information by size of room lay of week. The table showing utilization for each day of the week uses half hour periods in determining the number of use. That is everytime a room was used for any half hour period it has been counted in the numbers of rooms in use column.

second page of tables show the weekly student contact hours generated by major subject and type of room in which the ion occurred.

final table presents the net assignable square feet for laboratories by subject.

APPENDIX D

DEFINITION OF TERMS

Classrooms

Rooms and service areas used for the instruction of students that do not require special purpose equipment. Examples are general purpose classrooms, lecture halls and seminar rooms.

Estimated Value of Buildings

Estimated value of the building (including its foundation and connecting utilities) and the fixed equipment, equivalent to the full insurable value based on the current worth of the facilities.

Full-Time Equivalent (FTE) Student

One FTE student is defined as one student carrying 15 credit hours for the FALL term. In other words, the total FTE students at an institution would be determined by dividing the total student credit hours by 15.

General Auxiliary Service

Activities which are not related to instruction, research and public service functions which are of an income-producing nature. Primarily these include facilities used for residence and dining halls, student unions, bookstores, airports, intercollegiate athletics, and student health services.

General Research

Any activity the primary objective of which is discovery and/or application of knowledge. Included here are research activities related to the training of graduate students and university supported faculty research which is considered a part of the "normal load."

General Use Facilities

Rooms and their service areas relating to and available for use by all students, faculty and staff. Examples, are assembly facilities, museums, art galleries, food service and merchandising facilities, lounges and recreational facilities.

Gross Square Feet

Sum of all floor areas included within the outside faces of exterior walls for all stories or areas which have floor surfaces.

Instruction and Instruction Support

Any activity which is directly involved in the organization, administration, and presentation of programs in instruction. Included is all graduate student instruction of a non-research nature for which credit is given. Excluded is instruction which is classified as "continuing education" and/or "extension".

Laboratories

Rooms and their service areas requiring special equipment, used for regularly, or irregularly scheduled classes; specially equipped areas for staff and/or student laboratory work. Included in this category are teaching labs, special class labs, individual work labs and research laboratories.

Medical Care Facilities

Rooms and their service areas used for medical or dental examination and/or treatment of human or animal patients as a part of a program on instruction. Examples are human hospitals and clinics, human medicine-patient care facilities, dental clinics, veterinary hospitals, and animal care facilities.

Net Assignable Square Feet (NASF)

Sum of all areas on all floors of a building assigned to or available for assignment to an occupant and not including any spaces elsewhere separately defined.

Plant Operation and Maintenance

Activities such as custodial services, maintenance repair of buildings, campus security, and maintenance of grounds are included. Space for housing men and equipment associated with these activities, and space for housing university utilities are included.

Public Service

Any activity which is devoted to making available to the general public instruction and research and development results in forms ranging from activities of a cultural nature to include activities frequently described as "continuing education" and/or "extension". Offices, classrooms, and rooms devoted to publication and other communication media associated with the above activities are included.

Special Use Facilities

Rooms and spaces designated for specific purposes or programs, and requiring room configurations and/or fixed equipment peculiar to that purpose or program. Included in this category are armories; athletic and physical education facilities; audio-visual, radio and TV facilities; teaching clinics and demonstration facilities.

Sponsored Research

Any research activity which is funded from sources external to the university.

Student Services

Activities such as counseling, testing, job placement, organized student activities, and other areas not previously mentioned which are administered by offices commonly referred to as "Dean of Men" and "Dean of Women". Excluded are student health services and recreational activities related to residence halls. These categories are generally classified as auxiliary services.

Student Stations

Number of chairs, seats, laboratory desks or some other facility necessary to accommodate students during an instructional period.

Supporting Facilities

Rooms and spaces used on an institution-wide basis to accomplish the program of the institution. Examples are data processing facilities; storage and supply facilities; vehicle storage areas (garages, airplane hangers, etc.); central food storage and preparation facilities and central laundries.

Teaching Laboratories

Rooms used by regularly scheduled classes which require special-purpose equipment for student participation, experimentation, observation or practice in a field of study. Included in this category are instructional shops, typing laboratories, drafting rooms and band rooms.

Weekly Student Contact Hour

A unit of measure which represents one hour of instruction or research for one student in one week.
